Remarks begin on page 6 of this paper.

In the Claims:

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims:

1. (Amended) A method for an end-user of a service to create the service for a device using a platform owned by a platform owner, the method comprising:

receiving from the end-user linking information indicating a second pre-defined building block to link to a first pre-defined building block;

creating the service by linking and configuring the first and second pre-defined building blocks;

loading data relating to a service into a service execution environment from a database, the service execution environment comprising security settings and privacy settings;

determining whether the use of the data is of an acceptable type;

determining at run-time by the service execution environment whether the use of
the data by the service is permitted by the security settings and privacy settings; and
executing the service on the platform immediately, without testing the service.

- 2. (Original) The method of claim 1, further comprising receiving from the end-user configuration information to configure the first pre-defined building block.
- 3. (Original) The method of claim 1, further comprising creating the service based on the received configuration and linking information.
- 4. (Original) The method of claim 3, further comprising determining an integrity of the created service.

- 5. (Original) The method of claim 1, further comprising receiving from the end-user an indication of information to modify the service.
- 6. (Original) The method of claim 1, further comprising receiving from the end-user an indication of information to delete the service.
- 7. (Original) The method of claim 1, further comprising receiving from the end-user an indication of information to activate the service.
- 8. (Original) The method of claim 1, further comprising assigning a value to a variable of the first or second building block.
 - (Original) The method of claim 1, further comprising executing the service.
- 10. (Amended) A system for an end-user of a service for a device using a platform to create the service, comprising:

a server;

a platform residing on the server having a service creation interface to allow the end-user to create the service by linking a first pre-defined building block to a second pre-defined building block, the service being executed without requiring any testing:

a service execution environment for controlling at least program flow, security settings, privacy settings, and variables of the service;

a database for storing data related to a service and for providing data to the service execution environment;

a data processing system for examining at least external data and for determining whether the use of data within a service is acceptable:

a variable management module for at least checking the integrity of data delivered to the end-user of a service at run-time; and

a client comprising an interface for interacting with the service creation interface.

- 11. (Original) The system of claim 10, wherein the client interacts with the platform via a proxy server protocol.
- 12. (Original) The system of claim 10, further comprising a directory device which stores the first and second pre-defined building blocks.
- 13. (Original) The system of claim 10, further comprising a directory device which stores the service.
- 14. (Original) The system of claim 10, wherein the service creation interface prevents unauthorized users from accessing the service system.
- 15. (Original) The system of claim 10, wherein the device includes an Internet appliance.
- 16. (Original) The system of claim 10, wherein the client interface includes a dedicated client application.
- 17. (Original) The system of claim 10, wherein the first or second building block includes a variable to which an end user assigns a value.
- 18. (Original) The system of claim 10, wherein the first and second building block includes a building block configuration interface which guides the end-user through a process for configuring the building block.
- 19. (Original) The system of claim 10, wherein the client interface includes a web browser.

- 20. (Original) The system of claim 10, wherein the client interface includes a web browser having an intelligent skin.
 - 21. (Original) The system of claim 10, wherein the device includes a mobile device.
- 22. (Original) The system of claim 10, wherein the created service is delivered to the device via a wireless application protocol.
- 23. (Original) The system of claim 10, wherein the platform further includes rules for checking an integrity of the created service.
- 24. (Original) The system of claim 10, wherein the platform allows a user to configure the first or second building block.
